

Hushabye Nursery

At the push of a button, Hushabye Nursery is able to deliver evidence-based-outcomes to hospitals, insurance companies and secure grant funding to create a sustainable future.

“With every grant that we write, we have six to eight data points that we are required to report every time. With Kipu, at the push of a button, it gives us that data, which means that we don't have to use so much manpower to collect the data. And it's much more accurate.”

**Tara Sundem,
Founder and Executive Director**

ORGANIZATIONAL CHALLENGES ●

- **Meeting the required evidence-based data requirements** for hospitals and insurance companies required excessive manpower and results were not always accurate.
- **Ability to obtain funding grants** was limited due to lack of reporting and evidence-based-data.
- **Low confidence in quality** of discharge summaries and medical records sent to hospitals and providers due to lack of data.
- **Finding the right EMR solution** to fulfill behavioral health requirements as well as meet their day-to-day needs for babies and parents.

OUTCOMES ENABLED WITH KIPU ●

- **Generating usable and relevant data at the push of a button** to secure funding and meet strict evidence-based data requirements from insurance companies, providers and hospitals.
- **\$1m in grant funding has** been secured to date due to organizations identifying Hushabye as a fit for their grants as a result of comprehensive and accurate data being available.
- **Reduced manpower and time** required to obtain outcome metrics and increase accuracy by collecting and completing more robust charts.
- **Less money spent on medication.** With Kipu Charts and records, accurate assessments can be made on whether babies are on medication at the point of admission and if further medication is needed.
- **Hushabye streamlined end-to-end patient care**, helping them achieve a shorter overall admission duration (6-7 days) compared to the current average (16-21 days).
- **Able to keep track of the mom-baby dyad** from initial meeting to eventual discharge/end of program.

“We knew that we didn't need a huge robust EMR, like what they have in hospitals. But we knew that we needed something that had behavioral health, and robust in that fact but we also needed the baby side of things. And so, when we met with you all, you were willing to take a shot, and help us figure out the baby side, and do the mom side, and the dad side, because what you all have put together for the behavioral health is fabulous. It's easy to work with.”
